nadaa.ddnsfree.com

Summary

Computer Science graduate with Honours specializing in AI/ML, intelligent agents, and LLM systems. Built 15+ projects, including award-winning blockchain payroll and facial-recognition systems, with internship experience at SAIB Bank and Dell Technologies.

Education

Arab Academy for Science, Technology & Maritime Transport **Sep 2022 – Jun 2026**
Bachelor of Computer Science (Dual Degree), Graduated with Honours – Cumulative GPA: 3.69 / 4.00 *Cairo, Egypt*

- Dual-degree program in collaboration with the University of Northampton (UK).
- Coursework: Machine Learning, Computer Vision, NLP, Algorithms & Optimization, Parallel Computing, Compilers, Databases, Robotics Applications, Software Engineering (SDLC).

Skills

Programming Languages: Python, Java, C/C++, Go, JavaScript, TypeScript, Dart, PHP, R, Bash, SQL, HTML/CSS
AI / ML & Data: TensorFlow, PyTorch, Keras, Scikit-learn, NumPy, Pandas, OpenCV, Librosa, HuggingFace Transformers, Whisper, Docling; PDF extraction, OCR, NLP, Generative AI & LLM fine-tuning (DeepSeek-Coder, FLAN-UL2), Computer Vision, Reinforcement Learning, Explainable AI (SHAP, LIME, Grad-CAM)
Web & Application: Flask, FastAPI, React, Tailwind CSS, shadcn/ui, Vite, JavaFX, Tkinter, Flutter, SwiftUI, PyWebView
Blockchain & Security: Hyperledger Fabric, Chaincode (Go), Privy MPC / threshold custody, X.509 PKI, Cryptography
Data, Cloud & DevOps: MySQL, AWS RDS, SQLite, Docker, Kubernetes, Git, GitHub Actions (CI/CD), launchd
CS Foundations: Algorithm design & optimization, Data structures, Parallel computing, Compilers (lexing/parsing), Robotics & embedded (Arduino), SDLC
APIs & Tools: Twilio, Groq, Pydantic, Pytest, Graphviz, LaTeX
Soft Skills: Team collaboration, Analytical thinking, Communication, Mentorship

Experience

SAIB Bank **Aug 2026 – Sept 2026**
FinTech Intern *Cairo, Egypt*

- Studied financial technology under the Head of FinTech & Startup Partnerships and completed an emerging-technology case study.

Dell Technologies **Aug 2025 – Sept 2025**
Summer Intern *Cairo, Egypt*

- Gained cross-department insight through sessions with Dell employees across sales, pre-sales, and engineering roles.
- Completed workshops on front-end development, containerization (Docker, Kubernetes), and software engineering practices.
- Applied design thinking to enhance Dell's onboarding experience; shadowed a project manager and software engineer to learn daily workflows.
- Led the Academy Project from concept to business proposal, strengthening technical and collaboration skills.

DEPI – Microsoft ML Engineering Curriculum **Nov 2024 – May 2025**
AI/ML Engineer Intern *Zamalek, Egypt*

- Completed a 7-month intensive AI/ML engineering program (Microsoft ML Engineering curriculum) covering NLP, generative AI, computer vision, and model deployment.
- Executed hands-on projects at each milestone and an end-to-end capstone (Jarvis AI Assistant) integrating multimodal workflows and intelligent agent orchestration.

Megz **Aug 2020 – Nov 2021**
Computer Science Instructor *Cairo, Egypt*

- Assisted 30+ students with programming fundamentals, improving proficiency in Python and pseudocode.
- Supported the lead teacher in managing classrooms, grading, and tracking student progress; delivered personalized guidance that improved small-group performance by 20%.
- Mentored students in debugging and problem-solving, fostering a collaborative learning environment.

Projects

Graduation Project

Payramid: Money Transaction Microservice **2025 – 2026**

Go, Hyperledger Fabric, Privy MPC, Twilio, TypeScript

- Built a blockchain-based payroll-orchestration and immutable-audit layer enabling employers to disburse salaries instantly with cryptographically verifiable proofs of payment, settling on Egypt's national rails (InstaPay, Meeza, ACH) within banking (Law 194/2020) and data-protection (Law 151/2020) regulation.
- Engineered the smart-contract layer as Hyperledger Fabric chaincode (Go) on a 3-organization RAFT network with `MAJORITY` endorsement; validated with an automated Go suite of 91 passing tests (100%) covering serialization integrity, double-spend prevention, and a full STRIDE threat model.
- Delivered offline reach via encrypted SMS relay (one-time withdrawal codes for feature phones) and non-custodial wallets using Privy threshold (MPC) key management; authored the complete IEEE 830 SRS and IEEE 829 test plan.

Artificial Intelligence & Machine Learning

Financial Reports Analysis | *Python, FastAPI, Docling, Docker* **Sept – Oct 2026**

- Built a local application that locates and extracts statement pages from annual and interim financial-report PDFs, preserving source-page provenance and structuring periods, currencies, scales, and labels.
- Implemented deterministic `Decimal` metrics and accounting identity checks; linked figures to highlighted source regions and held inconsistent statements for review with explicit reasons.
- Delivered a background-processing workflow, fixed-template summaries limited to eligible facts, issuer-separated evaluation gates, and native macOS and Docker run profiles.

Jarvis AI Assistant | *Python, DeepSeek-Coder, FLAN-UL2, HuggingFace Transformers, Whisper* **Feb 2025 – On hold**

- Built a modular Jarvis-style AI assistant for code generation, image captioning, and voice interaction, with prompt-based instruction tuning and custom toolchain integration for autonomous task execution.
- Fine-tuned DeepSeek-Coder and FLAN-UL2 for multimodal encoder-decoder workflows; integrated NLP, Whisper-based speech recognition, and intelligent agent orchestration.

Oribu | *Python, OpenCV, Siamese Neural Network, Twilio API* **Jan – Jul 2023**

- Built an AI facial-recognition system using a Siamese neural network with contrastive loss for high-accuracy one-shot face verification, designed for criminal detection.
- Implemented real-time recognition with automated SMS alerts via the Twilio API. *(First Place AI/ML Project, AASTMT.)*

Music Genre Detection | *Python, TensorFlow/Keras, Librosa, Flask* **Dec 2025**

- Designed a CNN-LSTM-Attention deep-learning model classifying audio into 10 genres from mel-spectrograms, served through a Flask web interface.
- Added explainable-AI tooling (SHAP, LIME, Grad-CAM, Integrated Gradients), unit tests, and Sphinx-based API documentation.

CMAPSS Analytics Assistant | *Python, FastAPI, Groq Llama 3.3 70B* **May 2026**

- Built a NASA CMAPSS turbofan-degradation analytics service that parses FD001–FD004 telemetry, computes Remaining Useful Life (RUL), and ranks sensors by stability and informativeness.
- Exposed a FastAPI backend with an LLM-powered natural-language QA endpoint over failure-prediction signals.

Fera5 Invaders | *Python, Pygame, NumPy, TensorFlow, PyTorch, Scikit-learn* **Nov 2024 – Feb 2025**

- Developed an arcade-style space-shooter with a reinforcement-learning agent that autonomously learns to play the game.

Systems, Algorithms & Security

Parallel FFT Image Processing | *C++, CMake, Parallel Computing* **Jan 2026**

- Implemented 2D FFT-based image processing in C++ with sequential, partially-parallel, and fully-parallel variants to study parallel speedup, benchmarked through an automated CMake harness.

Interactive Knapsack Planner | *C++, SFML 3.0, Dear ImGui* **May 2025**

- Built an interactive algorithm visualizer for the 0/1 knapsack problem (greedy, brute-force, dynamic programming, branch-and-bound) with live DP-table animation and performance metrics.
- Added a Huffman-encoding module visualizing tree construction, bit-level encoding/decoding, and character-frequency analysis.

Simple Certificate Authority | *Python, Cryptography, X.509 PKI* **May 2026**

- Built a modular X.509 Certificate Authority supporting root-CA init, issuance, revocation (CRL), verification, renewal, and PKCS#12 export, with passphrase-encrypted keys and atomic database writes.

Text Editor (SCLPL) | *Python, Tkinter, Pillow, Graphviz, Pytest* **Nov 2024 – Feb 2025**

- Built a multi-tab editor with a full lexical and syntax-analysis pipeline for a custom toy language (SCLPL), including a hand-written lexer and parser for educational tooling.
- Added automatic language recognition, syntax highlighting, and parse-tree visualization.

OverClocked | *Bash, Python, Zenity, Docker* **Dec 2024 – Feb 2025**

- Built a cross-platform (Ubuntu/macOS) system-monitoring tool for hardware/software performance metrics with logging, visualization, and containerized deployment.

Applications, Automation & Games

Pixel Paradise | *JavaScript, PHP, HTML/CSS, Python* **May 2024 – Feb 2025**

- Worked as a core developer on a team-built retro web arcade with playable browser games and a custom pixel-art interface.
- Contributed across gameplay and full-stack site features, including user accounts and score tracking.

Personal Portfolio | *React, TypeScript, Vite, CSS Modules* **2026**

- Built a responsive project and experience portfolio with light/dark themes, a filterable project archive, and a downloadable CV; deployed through GitHub Actions to GitHub Pages with a custom DNS hostname.

Job Apply Bot | *Python, Groq Llama 3.3 70B, tectonic, launchd* **2026**

- Built a compliant multi-ATS job-search automation that polls public APIs (Greenhouse, Lever, Ashby, Adzuna), filters new-grad SWE/ML roles by skill overlap and location, and logs matches to CSV.
- Auto-tailors a LaTeX resume per posting via an LLM and compiles per-job PDFs with tectonic; scheduled hourly via launchd.

Autonomous Pick-and-Place Robot | *Arduino (C++), Flutter, Bluetooth* **2026**

- Built the control system for an autonomous mobile robot (Arduino Uno) with differential drive, a 3-DOF servo arm/gripper, and ultrasonic + line-tracking sensors for a Pick-and-Place competition.
- Developed a Flutter Android app communicating over Bluetooth (HC-05) for manual and automatic navigation modes.

Trivia Game | *Java, JavaFX, AWS RDS* **Apr 2024 – Feb 2025**

- Built a trivia game with single-player and real-time multiplayer modes backed by an AWS-hosted database for room management, question delivery, and live score tracking.
- Implemented a multiplayer waiting room with real-time chat, "is typing" indicators, and audio/visual feedback cues using FXML interfaces.

Jarvis Desktop (Fluid Jarvis Whisper) | *React, TypeScript, Tailwind, Flask, PyWebView* **May 2025**

- Packaged the Jarvis assistant as an offline cross-platform desktop app with a React/Tailwind front end, Flask backend, and PyWebView wrapper built via Vite.

Certifications, Awards & Training

3rd Place, Arab FinTech Challenge 2026 – Jordan FinTech Festival, Jordan (Sept 2026)
Represented Egypt with support from the Central Bank of Egypt (CBE); competition organized by GIE.
2nd Place, FinTech Got Talent 2026 – Egypt (Sept 2026)
Won with Payramid as part of a team sponsored by SAIB Bank; organized by FinTech Egypt under the CBE.
First Place, AI/ML Project Submission – AASTMT
Microsoft ML Engineer Course – DEPI (Digital Egypt Pioneers Initiative)
AI & Machine Learning Course – Universitat Autònoma de Barcelona
Computer Science Camp – Carnegie Mellon University
